PROFESSIONAL SUMMARY

I'm a junior web developer who loves building clean, responsive websites with HTML, CSS, and JavaScript. I enjoy turning ideas into simple, modern designs using Flexbox and Grid, and adding interactive features with DOM manipulation and events. Right now, I'm sharpening my skills by creating projects like a Netflix clone, Spotify clone, and small utility apps. I'm eager to grow, learn advanced JavaScript, and bring fresh energy to a software house team where I can make an impact.

WORK EXPERIENCE

Projects

- *Netflix Clone – Built with HTML, CSS, and JavaScript; responsive layout with Flexbox and Grid; interactive navigation and dynamic content.*
 - *Spotify Clone – Designed modern UI; implemented audio controls and playlist features using JavaScript.*
 - *Weather App – Integrated API calls to fetch real-time weather data; responsive design for mobile and desktop.*
 - *Utility Apps – Created small tools like BMI calculator, digital clock, and text utilities to practice DOM manipulation and event handling.*
-
